ICINITI Credit Card™ represents credit card processing for mid-market businesses. For many firms, receiving payment by credit card initiates a complex and largely manual process of authorizations that is prone to input errors and security risks. ICINITI Credit Card™ is a fully integrated product that automates several processing steps so payments get posted effortlessly to the invoice and accounts receivable. Receipt entries even get separated into individual batches for American Express®, VISA®, Master Card®, Diners Club® and other cards so daily reconciliation is a snap. Key features include:

- Pre-authorize or pre-pay orders
- Supports all major credit cards, including debit cards in the United Kingdom
- Batch capture invoice payments for pre-authorized orders
- Batch capture payments due for A/R invoices with scheduled payments
- Makes A/R receipt entries. Creates daily receipt batches based on credit card type, as needed.
- Issue credit card refunds against previously captured amounts
- Routes multi-currency transactions to separate merchant accounts based on currency code. (Requires multi-currency capable payment gateway)
- Integrates with Sage Accpac user group security
- Handles multiple Sage Accpac company databases
- Reports assist in reconciliation
- Network server installation is supported
- Easy setup
- Use of industry standard payment gateways
